REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art fails to teach or suggest the membrane having a body and lining as claimed. The closest prior art is considered to be Applicant's earlier work in WO 03/76690 or US2003/073228. However, that patent publication does not teach or suggest forming the membrane with a body and a lining on the body on the surface of the body facing the cathode.
2. Additionally, method claim 12 requires the presence of an apparatus according to any one of claims 1-11. Thus, because the apparatus itself is novel and non-obvious, the method of claim 12 using such apparatus is also novel and non-obvious.
3. Further, the examiner notes the grounds of rejection presented in copending application no. 10/939,001. However, a few minor distinctions between the present claims and the claims of the '001 application make the rejection grounds presented there not applicable to the present claims. Namely, the present claims require the anode to be in contact with the electrolyte. This feature was not required by the claims of the '001 application. Thus, because LaCamera et al teach that the anode necessarily had the membrane barrier placed on the anode to prevent the molten salt electrolyte from decomposing at the anode, LaCamera et al is deemed to teach away from the presently claimed invention in that LaCamera et al teach that it was undesirable for the molten salt electrolyte to contact the anode and the present invention requires such contact. Further, the claims of the '001 application did not require the presence of the membrane as a body and a lining as is currently claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
